CommandSoft Launches its third generation FibreJet® SAN Management Software

FibreJet 3.0 for OS X based SANs adds advanced metadata management including built-in file system repair, expansion and data migration capabilities.

Santa Barbara, California – **Tuesday, July 29, 2008:** CommandSoft, Inc., a leading developer for shared storage solutions, today announced their latest version of their popular FibreJet® SAN management representing the third generation of the FibreJet product line.

New to FibreJet version 3.0
Version 3.0 incorporates all features present in FibreJet version 2.x plus the following major additions:

- **Elastic Storage Expansion**
- **Data Migration Engine**
- **SAN Support Tools**
- **Built-in Advanced File System checking and repair utilities**
- **Built-in Virtualization Support**
- **New Meta-data-based Database Engine**
- **New "Users" and "Profiles" paradigm**
- **Increased Customization Options**

The third generation of FibreJet offers users many exciting new features. Administrators can now expand existing file systems* that need more space right within FibreJet. A new Data Migration engine allows SAN administrators block-copy or file-copy capabilities for data-duplication, backup, and storage retirement. SAN Support tools include event log auditing and SAN Health support in the form of built-in diagnostics reporting, file system checking, and advanced repair.

A new tool provides an unprecedented view into the virtualization of SAN structure including the relationships between a file system volume and its underlying physical disk, partition structures and software RAID structure. This tool also includes utilities for archiving the partition maps, useful not only for support purposes, but also recovering from certain catastrophic data-loss scenarios.

FibreJet 3.0 offers many new features in addition to those listed above, including an entirely new GUI, custom meta-data (in the form of user-defined graphics), and new ways for users to

manage multiple workflow environments with User Profiles, allowing SAN working environment configurations to follow Users from one workstation to another on the SAN.

FibreJet 3.0 for Mac OS X is available for immediate download free of charge for all FibreJet customers with active CommandSoft maintenance/support agreements at:

http://www.commandsoft.com/support.jsp

Users of FibreJet SANs not covered by active CommandSoft maintenance/support agreements can order FibreJet 3.0 upgrades for $499/seat from all authorized FibreJet resellers or CommandSoft directly at (805)730-7772.

About CommandSoft – **www.commandsoft.com**
CommandSoft, Inc. is the developer of FibreJet, a next-generation, shared-storage solution for Storage Area Networks (SANs). FibreJet enables file systems to be dynamically shared in a multiple-reader / single writer environment. CommandSoft was founded by the original developers of FibreNet™, StudioBOSS™, FC Net Director RAID™, SAN Manager™ and other storage software systems. They were among the first Fibre Channel innovators through their development of HBA drivers for Windows™, Solaris™, Macintosh™ OS and IRIX Fibre Channel chip sets from QLogic™, Emulex™, and Agilent™. For more information on the company, its products and its mission, visit the CommandSoft website at www.commandsoft.com or call 800-447-0144.

*Support for expansion of file systems requires certain criteria to be met in relation to the configuration of partitions on the storage.

FibreJet® is a trademark of CommandSoft, Inc. Windows is a trademark of Microsoft Corporation. Transoft, FibreNet, StudioBOSS, FC Net Director, SCSI Director and SAN Manager are registered trademarks of Transoft Networks, a Hewlett Packard Company.
